**CAPABILITIES**

*Ellwood Specialty Steel* is a fully integrated producer of a wide range of specialty tool steels. Our ExELL grades are made with the advanced ASEA-SKF steel making capabilities which include an ultra high powered electric arc furnace with subsequent state of the art ladle refining and vacuum degassing equipment for the most complete and modern ladle metallurgy technology.

Our steel making expertise and capability is further enhanced from a long forging history with optimum forging and heat treating practices to develop very special material characteristics of product uniformity, cleanliness, machinability, polishability, strength, toughness, hardenability and other steel properties. All this from production facilities certified to ISO 9002.

**QUALITY ASSURANCE**

Ellwood Specialty Steel is committed to providing products and services which will consistently meet or exceed all quality and performance expectations. We will provide customer and technical service that will ensure complete satisfaction. Being a very flexible provider, Ellwood Specialty Steel will establish product programs to fully support industry or customer requirements. Our extensive stock programs are supported by very short mill lead times of custom forged products. Customized stock programs are and can be available for specific customer needs.

This information is intended to provide general data on our products and their uses and is based on our knowledge at the time of publication. No information should be construed as a guarantee of specific properties of the products described or suitability for a particular application. Ellwood Specialty Steel reserves the right to make changes in practices which may render some information outdated or obsolete. Ellwood Specialty Steel should be consulted for current information and/or capabilities.

**APPLICATIONS**

*ExELL 15-5 PH* is used in various tooling and engineered parts. Some typical applications include:

- Injection molds for various plastics and rubbers.
- Medical and food industry tooling
- Extrusion dies
- Compression molds
- Plastic processing molds
- Manifold parts
- Glass molds
- Engineered components

*ExELL 15-5 PH* was developed by Ellwood Specialty Steel as a premium quality mold steel. ExELL 15-5 PH is a martensitic precipitation hardening stainless steel with certain advantages over conventional stainless mold steels. Some of these characteristics include:

- Superior corrosion resistance
- Simple heat treatment
- Uniformity of mechanical properties
- Easy to weld
- Excellent polishability
- Good dimensional stability
- Very good toughness
**Physical Properties**

- **Modulus of Elasticity, psi**
  - 70°F: 29,000,000
  - 400°F: 27,700,000

- **Thermal Conductivity, BTU in/ft² hr °F**
  - 70°F: 130
  - 400°F: 155

- **Density, lbs/cu.in.**
  - 70°F: 0.283

**ExELL 15-5 PH** is manufactured to the highest tooling quality standards for optimum service performance. From melting through final product testing, the finished product is a material with very good structure and mechanical property uniformity. Some manufacturing specifics include:

- VAR, Vacuum Arc Remelting
- Very precise chemistry control
- Heavy forging reduction
- Solution heat treating
- Precipitation (age) hardening if requested
- Complete manufacturing in facilities certified to ISO 9002

**Heat Treating (General Recommendations)**

*ExELL 15-5 PH* is normally supplied in either the solution annealed condition or the solution annealed plus aged condition. However, the following thermal treat data may be useful if stress relieving, aging or re-solution annealing might be necessary.

**Solution Annealing**

Solution annealing *ExELL 15-5 PH* should not be necessary. However, if aged material requires to be re-solution annealed, the following data may be useful:

- Heat to 1900°F, equalize, hold 30 minutes at temperature and air quench. Movement and distortion are likely. Resulting hardness will be ~30-33 HRC.

**Aging Temperature**

<table>
<thead>
<tr>
<th>Condition</th>
<th>Aging Temp</th>
<th>Hardness (HRC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>H925</td>
<td>925°F</td>
<td>~42-44</td>
</tr>
<tr>
<td>H975</td>
<td>975°F</td>
<td>~39-41</td>
</tr>
<tr>
<td>H1025</td>
<td>1025°F</td>
<td>~38-40</td>
</tr>
<tr>
<td>H1150</td>
<td>1150°F</td>
<td>~33-35</td>
</tr>
</tbody>
</table>

**Typical Hardness**

- P-20: 302 HB
- HOLDER: 293 HB
- 420F: 320 HB
- S-7: 55 HRC
- H-13: 52 HRC
- 420: 50 HRC
- 15-5 PH: 40 HRC

**Age Hardening**

*ExELL 15-5 PH* was not supplied in a specific aged condition (prehardened), the material can be age hardened with an aging temperature generally between 925° and 1150°F. The aging temperature is typically selected to attain a desired hardness level.

Most aging is accomplished by using a 975°F age or higher. A 975°F aging treatment is used for a certain balance of hardness and toughness while higher temperatur aging treatments will improve toughness and minimize over-aging if higher service temperatures are encountered.

*Machinability of P-20, HOLDER, 420F and 15-5PH is rated in the pre-hardened condition. S-7, H-13 and 420 are rated in the annealed condition. Overall ratings are 1-10 where 1 is the lowest rating.
